

Rules for bringing animals to Imaging Core

1. In order to conduct animal experiments at our facility, it is necessary for the relevant departments to approve the animal experiment plan. The copy of approved plan should be submitted to our facility in advance.

2. If the experiment corresponds to a genetic recombination experiment, the contents must conform to the application for genetic recombination experiments approved by our facility.

3. When moving animals from each laboratory to our facility or in the reverse route, put them in transport containers with appropriate escape prevention measures. Transport containers can be borrowed at our facility.

4. If the animal is a genetically modified animal, mark "transferring genetically modified animal" on the surface of the transport container.

5. When taking out the cage from the container for transportation in our facility's microscope room, be sure to set the rattle back in a predetermined position in the microscope room.

6. In case of escape, first try to catch and contact our staff.

7. The microscope room should be kept clean and cleaned after the experiment so as not to scatter animal manure, bait, etc.
