

The installation of a treatment table for mice and rats

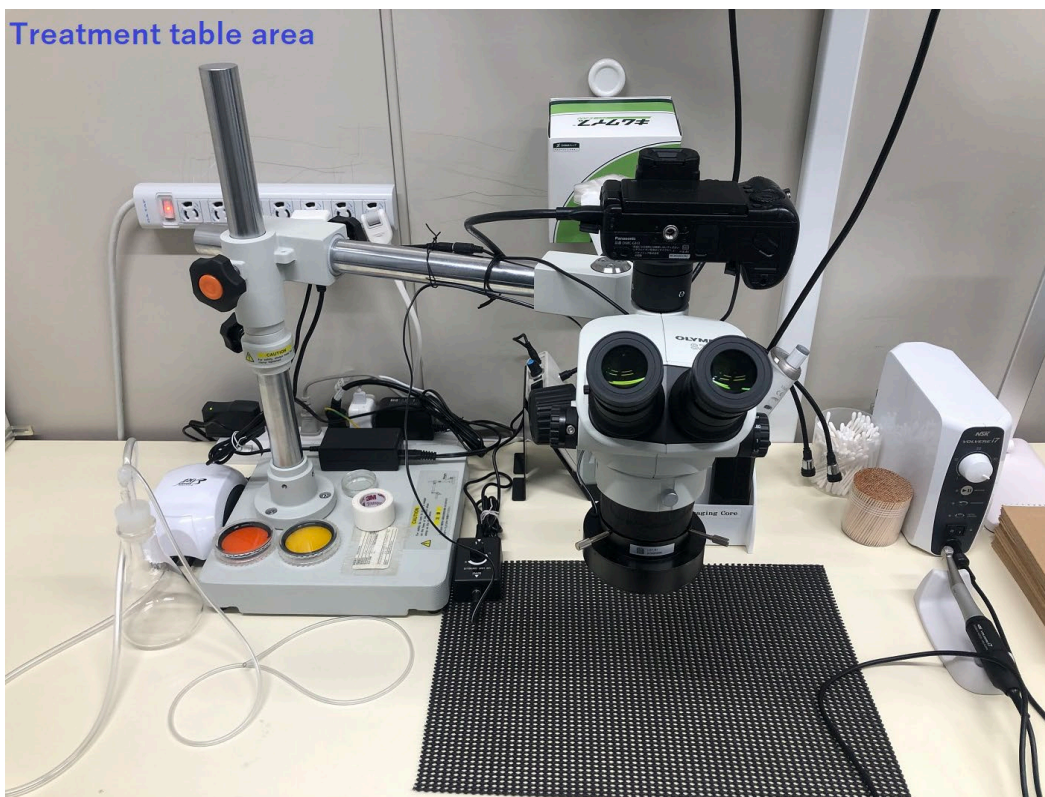

A treatment table for mice and rats has been prepared in the in vivo imaging area of the N301 microscope room.

A stereomicroscope for surgery, a camera for recording, bright-field illumination tools, illumination tools for fluorescence observation, and a dental drill are available.

This place can only be used by those who have applied for animal experiments. Those who wish to use this facility must receive an explanation of the rules of use from the person in charge beforehand.

Please contact Imaging Core staff prior to use.

Also, reservations are required at the time of use as well as for the microscope.
