

Notice on wearing masks after 1. April

From April 1, 2023, the University of Tokyo's guidelines for measures against corona infectious diseases have changed. Imaging core operations will also comply with this change.

1. From April 1, wearing of masks will be based on personal judgment.

However, if two or more people use the same microscope, we recommend wearing a mask.

2. The wearing of gloves is also left to individual judgment, but please continue to disinfect your fingers when entering the room.

Thank you for your cooperation.
